

THE CONTROL SYSTEM LIFECYCLE EXPERTS™

Trust your control system to a proven team who knows how to prepare your operation for the future.

ICA Engineering

We Know Your World

Led by some of the most innovative and recognized control system engineers, integrators and business process designers in the industry, ICA Engineering is ready to take your control systems into the future. Our expert team possesses over 60+ years of collective experience in solving complex control system requirements.

Our D⁴ Full Lifecycle Methodology

Focused on Your Success

Our comprehensive, four-phase process includes:

- **Define** Fully defining your requirements for now and the future.
- **Design** Creating a solution optimized for your application.
- **Develop** Including acquisition, integration, fabrication.
- **Deliver** From installation and commissioning to training and support.

Process & Specialty Chemicals

Putting your process first so that efficiency is maximized.

Plastics & Resins

Ensuring that your systems are optimized for output.

Food & Beverage

Whether process or batch, we're focused on flexibility and safety.

Power & Utilities

Reliability is the cornerstone of our experience and proven results.

Water/Wastewater

Lifecycle solutions and processes that protect your public.

Pharmaceuticals

Experience counts, especially in 21 CFR Part 11 regulated plants.

Cosmetics & Personal Care

Positioning SCADA and control systems to maximize profitability.

Packaging

Demonstrating the power of a flexible approach to systems design.

Serving Your Needs Across the Northeast and Mid-Atlantic

Headquartered in Union, New Jersey, our firm is ideally positioned to support your operations across fourteen states and beyond. That's why clients ranging from global multinationals to agile, growth-driven market leaders to forward-thinking state and local agencies have called on ICA Engineering to support their needs.
